

I support XM satellite radio and the XM Instant Traffic & Weather and oppose NAB's petition 04-160. Satellite radio provides its paying customers a wide variety of listening choices that are not available elsewhere, especially when travelling through this great country of ours. The traffic and weather reports are invaluable when travelling to any of our major cities and facilitate trip planning immensely. Knowing what conditions lay ahead is very important and can be heard from literally thousands of miles from one's destination. This is not available anywhere else. Satellite radio may someday be a viable way to broadcast national security alerts and other public safety announcements in realtime to our entire nation. I respectfully urge the FCC to reject the NAB's petition 04-160...Sincerely, Jack Romansic
